

Sub D1
a control program responsive to said monitor to select which of said one or more servers will execute said communications services;

wherein at least one of said one or more servers comprises an intervening server and is adapted to intercept a supplementary communications service request to determine whether execution of said supplementary communications service request is carried out by a server other than an original requested server.

CD
Cont'd
5. (Twice Amended) A communications network resource usage optimization system in an interconnected network system, comprising:

one or more servers in the interconnected network system adapted to execute supplementary communications service requests;

a monitoring unit connected to each of said one or more servers to receive and decode supplementary service information for the supplementary communications services being requested; and

a control program responsive to said monitor decoding supplementary service information adapted to select which of said one or more servers will execute said communications services, said control program further enabling said optimization system only under predetermined conditions;

wherein at least one of said one or more servers comprises an intervening server and is adapted to intercept a supplementary communications service request to determine whether execution of said supplementary communications service request is carried out by a server other than an original requested server.

C3
Sub D1
9. (Twice Amended) A method for controlling communications network resource usage in a communications network, comprising:

enabling supplementary communications service requests;

intercepting said supplementary communications service requests at an intervening server before execution by a destination server;

receiving and decoding supplementary service information for said supplementary communications service being requested; and

selecting which of said one or more servers will execute said communications services.
